Radpak

StandUp Pouch Side Loading Case Packer.

The automated system handles three lanes merging into a single lane and packs the gusseted pouches smoothly into the cases.

The machine uses premium components ensuring long life and maximum efficiency.

Designed for StandUp pouches, four sided seal pouches and cartons.

RSC Top Loading Case Packer.

The automatic former uses an innovative solution to erect cases.

The packer counts, groups and then top loads pouches into die-cut blanks. The rows are tightly packed with minimal gaps between the products ensuring a compact, formed case at closing. Designed to handle StandUp pouches, four side seal and cartons.

The automatic top taper folds the flaps and applies adhesive tape.

The Radpak RRD Case Packer.

The Radpak RRD Case Packer can pack a group of pouches, bags, or boxes. The group can be packed in a wrap-around case, wrap-around tray, or wrap-around tray with a lid.

Functionality:

- The Case Packer collates single packages, into a group.
- For example, a group of 2 rows of 5 pouches each.
- Then it tightly wraps a case or tray around the group.
- An optional lid maybe applied on the outside or inside of the tray.
